

Movies and series review application

Name: Radolina Petrova

Class: S-CB06-S2

Student number: 4443527

GIT Repository link: <https://git.fhict.nl/l478897/s-cb06-s2-radolina-petrova-wad-project>

Purpose of this app:

The simple purpose of this application is to enable the user to find all the information he needs about a certain movie or tv series in one place. From basic information like the cast of the movie to the budget of the whole production.

Not only this, but every user will be able to rate the uploaded movies and series, as well as comment and express their opinion, so other people can see it.

Functionalities of the app:

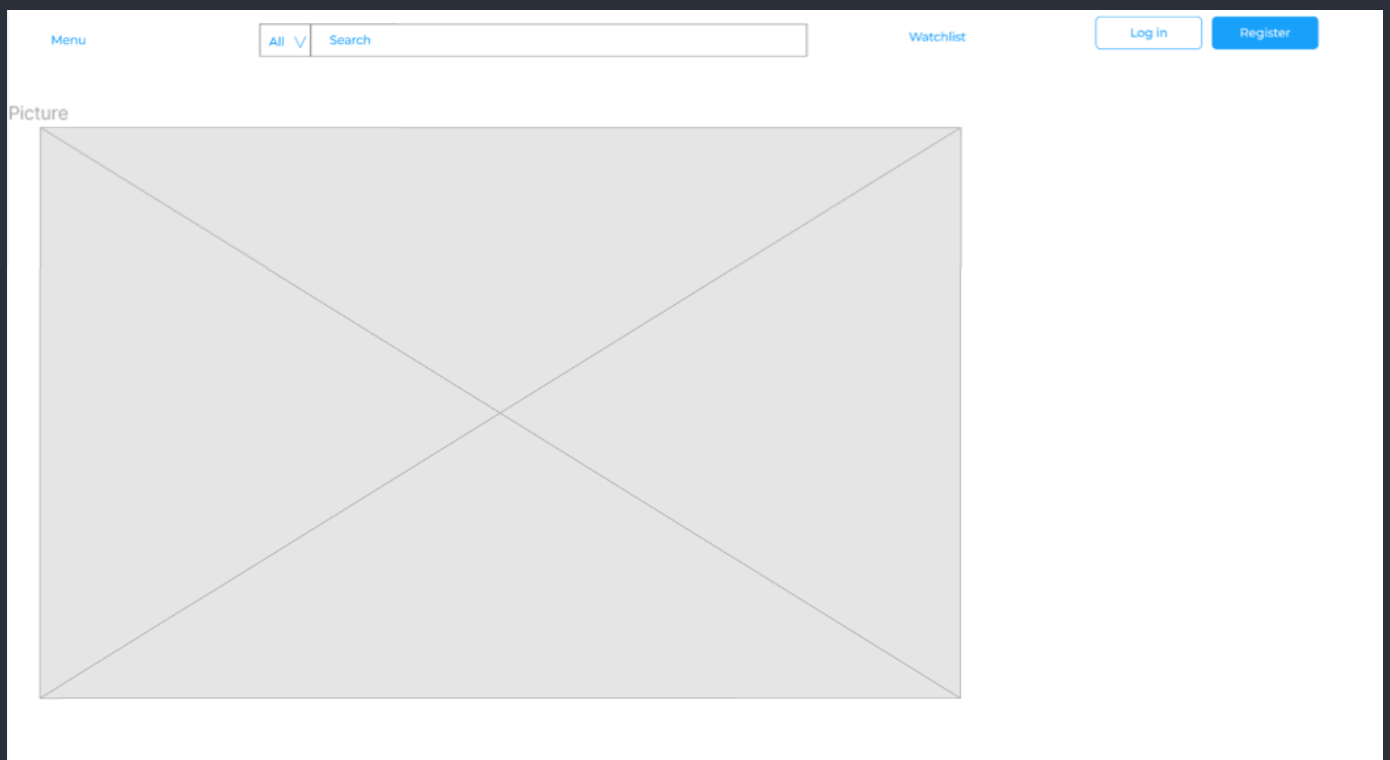

Most importantly for viewing information about the movies and series the user will not be obliged to create an account. Everyone can go to the app to view the provided information and view the rating that the people provided. The user will also be able to filter the series and movies according to his liking. Everyone can search for a movie from a specific genre, actor, release date, rating, popularity. Also, a user will be able to see what upcoming movies there are and where he can watch them.

Furthermore, if the user creates an account, he will be able to create a personalised watchlist, where he can add all the movies and series he intends to watch. Not only that, but he'll be able to rate all the movies and the series as well as give his opinion on them and rate other people's opinion based on their helpfulness.

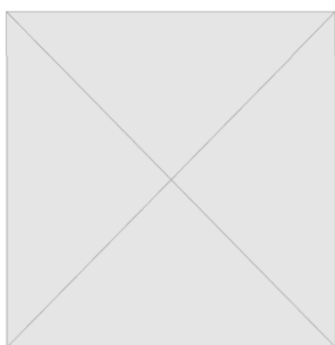

Low fidelity wireframe of the homepage of the application:

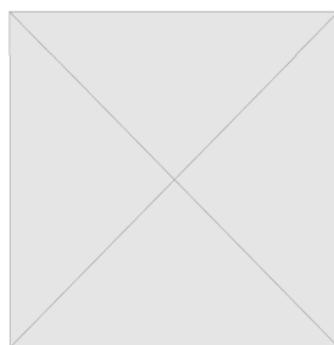

Newly added

☐ [Add to watchlist](#)

☐ [Add to watchlist](#)

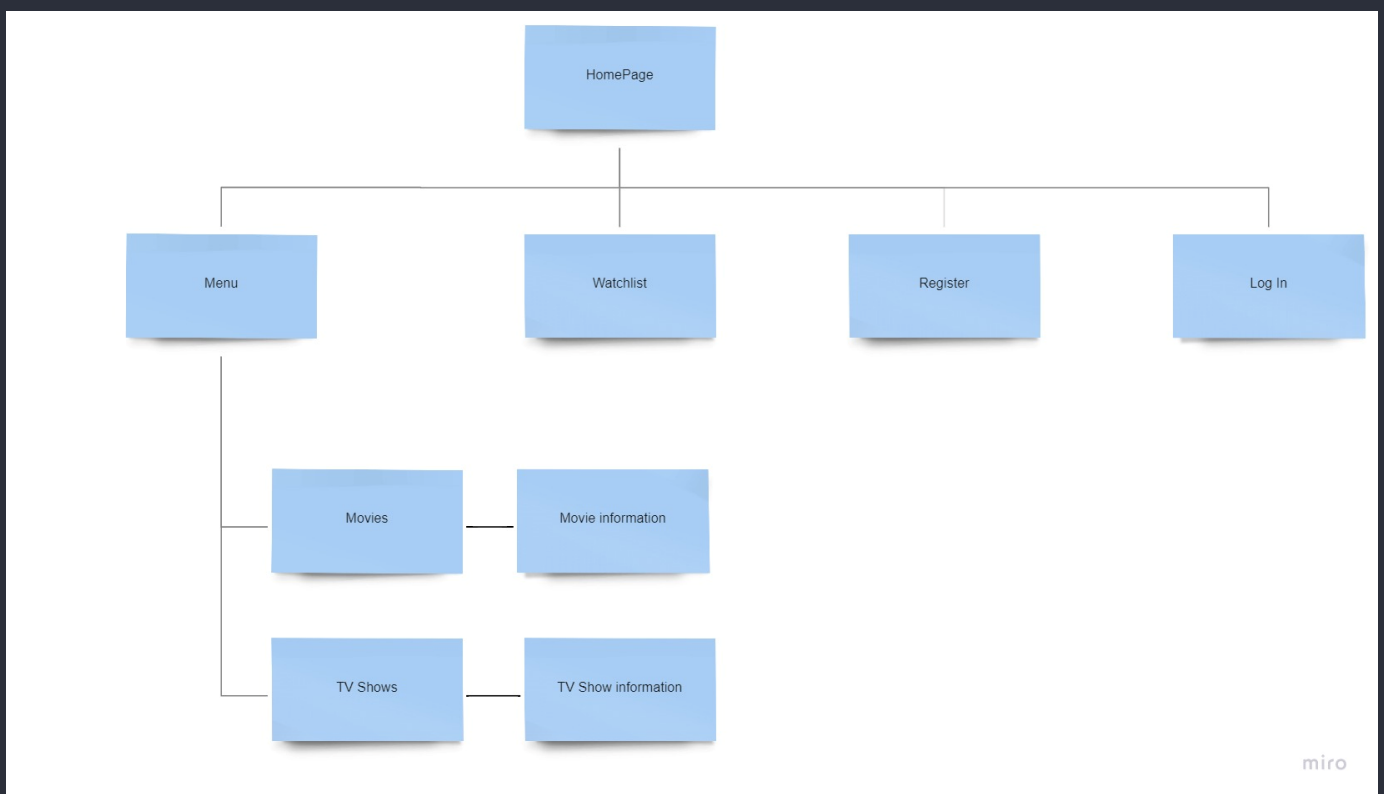

☐ [Add to watchlist](#)

Soon in theaters

A rough sitemap of the pages, that will possibly change during the work process:

As shown in the low fidelity wireframe my idea about the page consists of displaying partialy some of the information the application contains, such as the newly added movies or series as well as the upcomming ones, and hopefully catch his attention.

The homepage is designed in such way, that the user can find easily navigate through the pages and find all the information he needs.

Overall, the purpose of the application is to make finding a good movie to watch according to the users preferences by giving him all the information he needs or simply helping someone interested in more details abot a certain pro
