Movies and series review application

Name: Radolina Petrova
Class: S-CB06-S2
Student number: 4443527
GIT Repository link: https://git.fhict.nl/I478897/s-cb06-s2-radolina-petrova-wad-project
Purpose of this app:

The simple purpose of this application is to enable the user to find all the information they need about a certain movie or tv series in one place. From basic information like the release date of the movie to the budget of the whole production.

In future development the user will be able to rate the uploaded movies and series, as well as comment and express their opinion, so other people can see it.
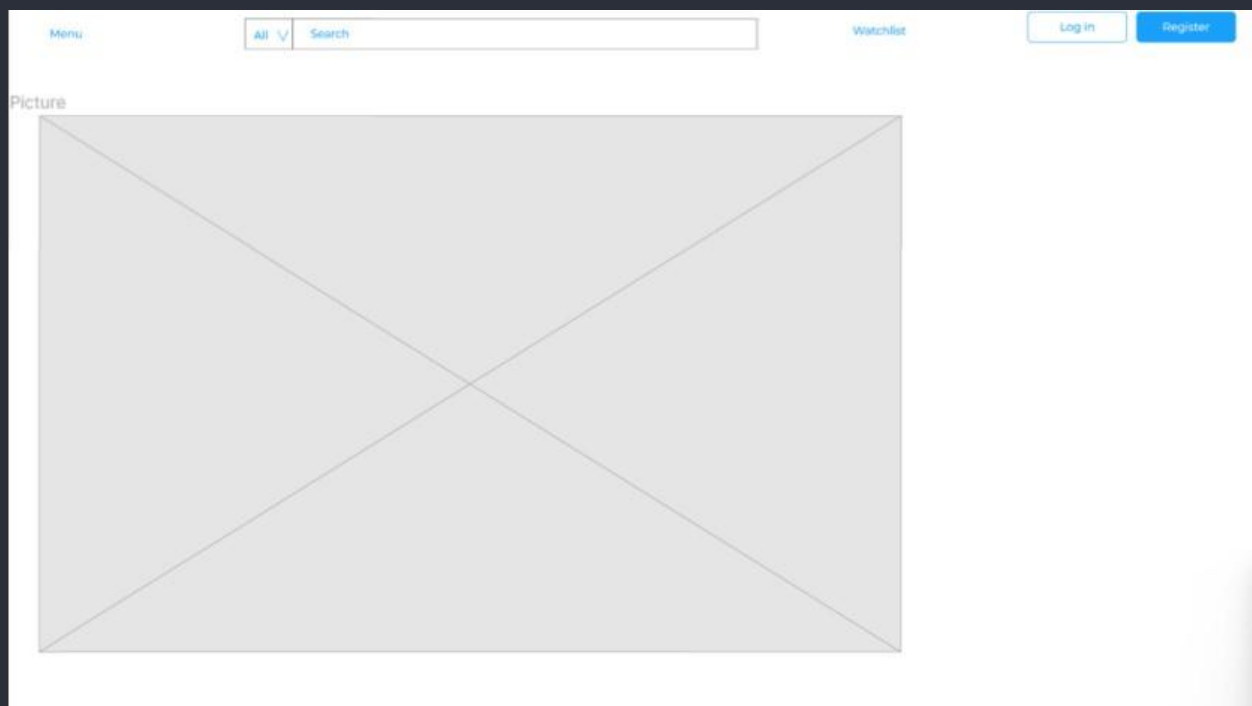

Functionalities of the app:

Most importantly for viewing information about the movies and series the user will not be obliged to create an account. Everyone can go to the app to view the provided information. Also, a user will be able to see what upcoming movies there are and where he can watch them.

Furthermore, if the user creates an account, he will be able to create a personalized watchlist, where he can add all the movies and series he intends to watch.
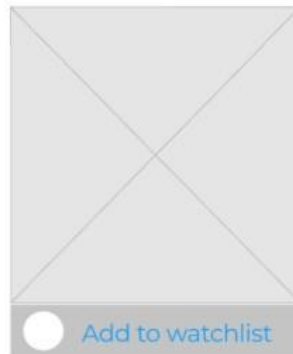

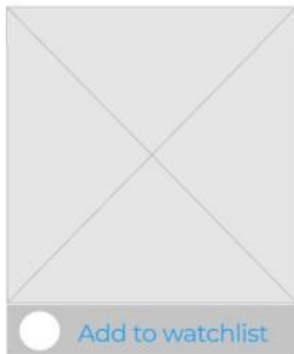

Low fidelity wireframe of the homepage of the application:

Newly added

Add to watchlist

Add to watchlist

Add to watchlist

Soon in theaters

A sitemap of all the pages:

CP info

Movie

As shown in the low fidelity wireframe my idea about the page consists of displaying partially some of the information the application contains, such as the newly added movies or series as well as the upcoming ones, and hopefully catch his attention.

The homepage is designed in such way, that the user can find easily navigate through the pages and find all the information he needs.

Overall, the purpose of the application is to make finding a good movie to watch according to the user's preferences by giving him all the information he needs or simply helping someone interested in more details about a certain production.
